PACKAGING EQUIPMENT

EQUIPMENT SUPPLIER FOR THE SOAP INDUSTRY

SAS MARIANI - ITALY

SOAP PACKAGING EQUIPMENT

In the years, the end-of-line of a soap finishing line developed and differentiated more and more. The presentation of the soap bar became extremely important due to the sale strategies of the distribution channels.

We at **SAS** detected these always more demanding needs for an improved product presentation and developed a full range of services. Now we are in a position to supply practically any typology of soap packaging machine. Most of them are supplied fully rebuilt starting from our huge second-hand stock. We also introduced new models in order to be able to answer to even more demands.

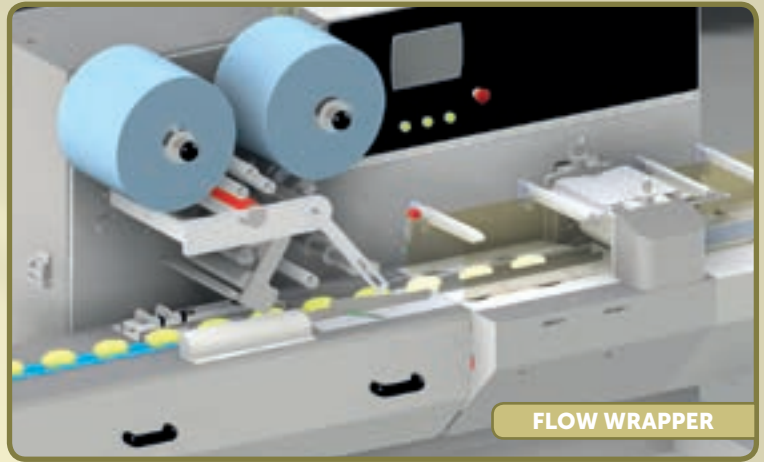

PAPER WRAPPERS

Among hundreds of supplied wrappers, we rebuilt the fastest ones (400 wpm and more) and, in the last few years, we started supplying two different SAS brand-new models: the Ecowrap for small applications up to 100 wpm and the Wrappex for 200 wpm and more.

FLOW WRAPPERS

We supply brand-new Flow Wrappers completed with various Soap Feeders or directly connected with the upstream finishing machine (Direct Transfer).

STRETCH AND PLEAT WRAPPERS

We recently entered the market not only with fully rebuilt second-hand equipment but also with our brand-new Filmex and Plisser models.

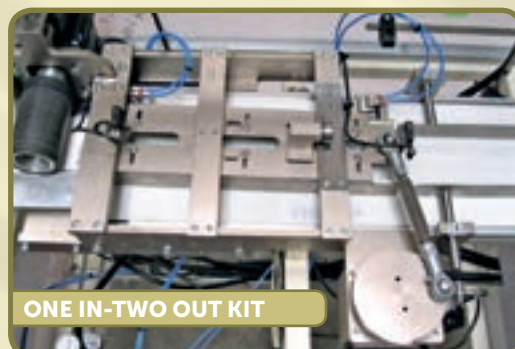

CARTONERS

We transform used cartoners sourced from different industries into "Soap" Cartoner by applying specific Soap Feeders hence creating a practically new machine.

BUNDLERS

We developed a special expertise in these machines; they are non-standard solutions to dozens of different packaging combinations and thanks to kits designed on purpose, we transform available bundlers into the exact machine required by the customer.

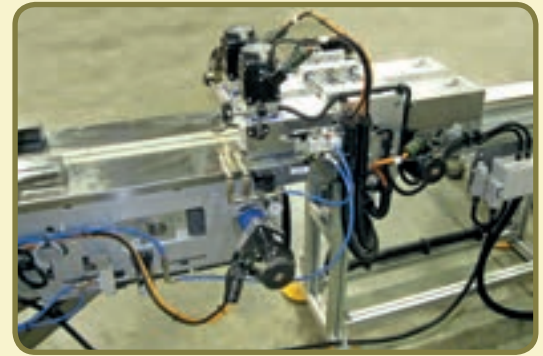

CASE PACKERS

We concluded several projects both by rebuilding used Case Packers and by developing original versions together with specialized suppliers; we can offer horizontal or vertical Case Packers as well as Wrap-Around Packers.

SOAP FEEDERS AND DIRECT TRANSFERS

In the years we designed many Soap Feeders for various packaging machines and speeds; recently we supplied built-in machines with Direct Transfers.

KITS AND OPTIONS

We developed a full set of devices studied following the Customer's requirements. We supply kits for hot-melt or cold glue application, for use of pre-cut sheets instead of continuous reel, for use of BOPP plastic material, for printing codes, for tear-tape application, for electronic print registration and many other needs.
